

Sometimes it is difficult to know where to start with so many methods to choose from.

This course will help you to understand the purpose and context of a range of different methods, equipping you with the skills to undertake a qualitative or quantitative synthesis in a systematic review.

As well as learning about the wider context of research synthesis, you will undertake a thematic synthesis, meta-analysis and mixed-methods synthesis, covering the main requirements for most systematic reviews. There is also an optional topic on Realist Synthesis.

Systematic reviews: meta-analysis, qualitative synthesis, and mixed methods synthesis

A short course on the theory and practice of qualitative and quantitative approaches to synthesis

This online course is designed for experienced researchers who wish to gain an advanced, working knowledge of synthesis methods. You will learn about, and use, both established and emerging methods that you can then employ in your own research.

It will provide you with highly sought after skills and knowledge, supporting career development in those academic, policy or practice settings where systematic reviews are used and produced.

The course can also be taken as part of MSc Research for Public Policy and Practice.

About the IOE

The UCL Institute of Education (IOE) is ranked number one in the UK for education research. It is part of University College London and is located in the heart of central London. Founded in 1902, it is today recognised as one of the world's leading graduate schools of education and related social sciences and offers an unrivalled range of Masters and Doctoral degrees.

'A highly relevant course for anyone with a passion for research synthesis... an engaging and innovative learning experience.'

Participant from 2014

'This course really made me appreciate the difference between quantitative and qualitative systematic reviews and will go a long way in helping me decide on my dissertation topic.'

Participant from 2014

Fees

From £670
