

EPPI-Reviewer Web: Creating interactive evidence gap maps

How to create an interactive evidence gap map

The first step to create an interactive evidence map is to create a JSON report of your data extraction coding tool. To do this:

1. In the References tab, select all of your items by checking the box at the top of the column.
2. Click on Coding Report and select the coding tool you want to populate your map with, in this case Data extraction.
3. Select the JSON report checkbox and click on Get Report.
4. Save the JSON report to your device by clicking on the blue save icon.

5. Head to the [EPPI Mapper app](#) and upload your JSON file.
6. Choose the Column (y) and Row (x) attributes, as well as the segmenting attribute – this is what populates the cells.
7. Choose any filters you want and the meta properties (e.g. DOI, URL, Title).
8. Enter information about the review into the About section.
9. The 'About submitting studies' section allows you to provide readers with information about how they could submit a study for possible inclusion in your interactive evidence gap map.
10. Give it a title and add any desired logos/images.
11. Download your map and save the HTML file to your computer.
